For Immediate Release

**SolSource Inc. Opens Summit County Office with Colorado Building Company;  
New Partnership to Bring Jobs and Increase Renewable Energy in Summit County**

**SolSource hosts Free Solar Energy Seminar Sept. 19 & 26 through Parade of Homes Tour**

BRECKENRIDGE, CO.; September 16, 2009 -- [SolSource Inc. \(www.SolSourceinc.com\)](http://www.SolSourceinc.com) a leading Colorado solar engineering, procurement and construction firm, has formed a new partnership with Breckenridge-based **Colorado Building Company** to bring renewable energy and new jobs to Summit County.

The new SolSource Summit County office completed its first solar energy installation this week at a Breckenridge home in the Highland's subdivision -- #15 on the Summit County Parade of Homes tour. The home, located at 581 Preston Way, is distinguished by a 4.2 kW solar photovoltaic system which can produce over 6,000 kilowatt hours of energy annually and prevent more than 12,000 pounds of CO2 from entering the atmosphere per year. SolSource says this is the first of many anticipated residential and commercial solar installations coming from the new partnership.

"SolSource as a provider of solar PV and solar thermal systems is the perfect complement to our company," said Chris Ebersberg, director of business development for Colorado Building Company. "We have been building energy-efficient homes in the Mountain region for 11 years, and SolSource has designed and installed over 400 residential, commercial and institutional solar systems throughout Colorado. Through this partnership, we can offer homeowners new renewable energy products at a competitive price with a seasoned, well-respected solar energy company. We believe Summit County is ready for more renewable energy," said Ebersberg.

**Free Solar Energy Seminar**

At 2 pm on Saturday, September 19 and again on Saturday, September 26, SolSource will offer a free Solar Energy Seminar at the newly-completed 581 Preston Way home. Dave Lyskawa, SolSource Vice President of Sales, will give an overview of the solar system and provide a hands-on demonstration of solar PV technology.

Colorado Building Company has built homes with energy efficiency in mind throughout the Colorado Mountain region since 1998. Recent projects include a **Steamboat Springs** home owned by the creators of the South Park Television Series that will be featured in an upcoming issue of *Architectural Digest*, and a net zero home now under construction in **Breckenridge** using advanced building technologies, a SolSource solar PV array, and a GeoExchange heating and cooling system.
